

## Dangerous Goods Containers

**Finding it hard to meet OH&S Regulations?**

**Hazardous and toxic material storage becoming a problem?**

**Not any more ... introducing Price & Speed's range of dangerous goods containers.**

Designed and manufactured in compliance with ASI940-2004.

Double doors with emergency release handle.

Price & Speed's dangerous goods containers come fully ventilated with four 1500mm x 300mm vents in our 10ft model, and six vents in our 20ft model.

Our aluminium-grill floor has been implemented to assist in minimizing the risk of accidental substance ignition.

### Bunded floor

In case of spillage, Price & Speed's dangerous goods containers have purpose-built bunded floors with a catchment area capable of storing up to 1,000L of spillage (10ft unit), and up to 2,000L in the 20ft unit. The bunded access provides a quick and easy method of drainage and disposal.

Price & Speed's dangerous goods containers can be used for storing a range of hazardous goods and make excellent storage facilities for "Class 3 Flammable Liquids". They are the perfect response to what is required under Government Legislation, such as the "Dangerous Goods Act, 1975".
